Black and Tan Coonhound

61% - 99%

The Black and Tan Coonhound is a scent hound that is believed to have originated from the crossing of the Bloodhound and Foxhound. They are passionate workers and obedient companions, but can become destructive if they are not properly exercised.

Hailing from the Ozarks and Smokies in the United States, the Black and Tan Coonhound is known for their cold nose - the ability to pick up and follow a trail, no matter how faint it is. Their strong hunting instinct makes them rarely thought of as a family dog but they are actually quite silly and have a laidback, gentle nature.

Their stamina makes them great jogging or running buddies but they are equally happy on a daily walk. Black and Tan Coonhounds love children and are great playmates. They also get along well with other dogs and even cats if they are socialized properly. They also make great watchdogs - alerting you with a deep throated bark when someone is approaching. They are not aggressive, though.

Black and Tan Coonhounds can be stubborn so they require firm, consistent training. They also love to bay and howl - especially if there are squirrels or other small animals around. If they are bored, they can be destructive and noisy. They are not homebodies, either, and will wander off if given the chance.

+ Major Health Concerns

The Black and Tan Coonhound are prone to [hip dysplasia](#), ear infections, and weight gain. Because of their high energy level, this breed is best suited to an active family.

- Interesting Facts

There are two types of Black and Tan Coonhounds - bench (show) lines and field lines. The field lines are bred for hunting and field work.

Black and Tan Coonhounds are an American creation and the most frequently recognized of all of the Coonhound breeds.

Norwegian Elkhound

26% - 39%

The Norwegian Elkhound may be reserved toward strangers, but is enthusiastically friendly to those it knows. They are loyal and sensitive, and may become upset if they feel that they have been treated unfairly. They are fairly independent and have a mind of their own.

Originally bred to hunt moose and other large game, the Norwegian Elkhound is extremely smart and has a delightful sense of humor. They are exceptionally devoted to and protective of their family. They make great guard dogs, especially since they are barkers.

Early training is necessary as Norwegian Elkhounds are independent thinkers and will take over your home if given the chance. They are very adventurous and love to roam around outdoors. Adequate exercise is necessary, especially since Norwegian Elkhounds have incredible stamina - they can play for hours.

Because of their affectionate, loving nature, Norwegian Elkhounds make great family dogs. They do very well with children but they are wary of other dogs (especially of the same sex) and could be aggressive if not socialized properly.

+ Major Health Concerns

The Norwegian Elkhound is prone to [hip dysplasia](#). They tend to gain weight rather quickly. They may also have [Progressive Retinal Atrophy](#) (PRA). They may also have [Fanconi Syndrome](#), a kidney disorder.

— Interesting Facts

The Norwegian Elkhound is one of the ancient Northern Spitz-type breed of dog and is the National Dog of Norway. This breed is part of Viking culture and the rich history of Norway.

They have a very Wolf-like face.

48-55 pounds	19-5-20.5 inches	12-15 years	Hound Group

The DNA MY DOG Canine Breed Determination Test is designed for the sole purpose of identifying breeds found in the genetic composition of dogs.

We cannot determine whether or not a dog is purebred; we can merely identify DNA that matches the validated breeds that make up our database.

Your analysis has been compiled based on the results obtained from your DNA sample submission, and has been processed with a reasonable amount of certainty. It is possible that there have been some random changes within your dog's DNA which may have affected the results. Our testing procedures and database are designed to recognize that this may happen and minimize any effect. It is understood that no analytical test is 100% accurate. DNA MY DOG is not responsible for any inferences made about any individual dog based upon the provided information.

Our test is based upon our database of recognized breeds. If your dog contains other breeds, not in our database, it may give rise to the identification of breeds earlier in your pet's history and may therefore provide a seemingly unlikely result for your dog.

It is important to understand that each dog is uniquely individual. Two dogs with the same breeds detected in their DNA may exhibit drastically different physical traits. In terms of behavior and personality, while certain traits may generally be associated with specific breeds, behavior will also be influenced by environment, training and handling.

The enclosed behavior, health and personality summary is for informational purposes only, and is based on information publicly available on purebred dogs. This information is not intended to predict disease or behavior, but is intended solely as a guide to traits often found in the breeds identified in your dog. These traits may or may not be found in your individual dog.
